#### DETAILED ACTION

## Specification

1. The lengthy specification has not been checked to the extent necessary to determine the presence of all possible minor errors. Applicant's cooperation is requested in correcting any errors of which applicant may become aware in the specification.

### Drawings

2. The drawings are objected to because in Fig. 2 correct typo in boxes 50 by deleting "Cross-Conneciton" and inserting --Cross-Connection---. Corrected drawing sheets in compliance with 37 CFR 1.121(d) are required in reply to the Office action to avoid abandonment of the application. Any amended replacement drawing sheet should include all of the figures appearing on the immediate prior version of the sheet, even if only one figure is being amended. The figure or figure number of an amended drawing should not be labeled as "amended." If a drawing figure is to be canceled, the appropriate figure must be removed from the replacement sheet, and where necessary, the remaining figures must be renumbered and appropriate changes made to the brief description of the several views of the drawings for consistency. Additional replacement sheets may be necessary to

Art Unit: 2666

show the renumbering of the remaining figures. The replacement sheet(s) should be labeled "Replacement Sheet" in the page header (as per 37 CFR 1.84(c)) so as not to obstruct any portion of the drawing figures. If the changes are not accepted by the examiner, the applicant will be notified and informed of any required corrective action in the next Office action. The objection to the drawings will not be held in abeyance.

3. Figure 1 should be designated by a legend such as --Prior Art-- because only that which is old is illustrated. See MPEP \$ 608.02(g). Corrected drawings in compliance with 37 CFR 1.121(d) are required in reply to the Office action to avoid abandonment of the application. The replacement sheet(s) should be labeled "Replacement Sheet" in the page header (as per 37 CFR 1.121(d)) so as not to obstruct any portion of the drawing figures. If the changes are not accepted by the examiner, the applicant will be notified and informed of any required corrective action in the next Office action. The objection to the drawings will not be held in abeyance.

### Claim Objections

4. Claims 1-5 are objected to because of the following informalities: in claim 1 line 5, the words "an identifier"

Application/Control Number: 09/777,171 Page 4

Art Unit: 2666

seem to refer back to the "identifier" recited in claim 1 line

2. If this is true, it is suggested changing "an identifier" to

---the identifier---. Appropriate correction is required.

# Claim Rejections - 35 USC § 112

5. Claims 1-5 are rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.

In claim 1 lines 11-12 which recite "the previously defined band" and "the received identifier" lack clear antecedent basis because no previously defined band nor received identifier have been previously recited in the claim and therefore the limitation is not clearly understood. In claim 3 lines 6 and 9 which recite "the path fault" and "the use" lack clear antecedent basis. In claim 5 lines 4-5 which recite "the judged band use" lacks clear antecedent basis. In claim 5 line 3 which recite "a path line" is not clear as to whether it is reciting --said line--- of claim 1 line 7.

Claims 2 and 4 are rejected under 35 U.S.C. 112, second paragraph because they depend from rejected claim 1.

Application/Control Number: 09/777,171 Page 5

Art Unit: 2666

## Claim Rejections - 35 USC § 102

6. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless -

- (e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.
- 7. Claim 1 is rejected under 35 U.S.C. 102(e) as being anticipated by Doverspike (6,097,696).

  Regarding claim 1:

Doverspike discloses the transmitter, comprising: a detection part for detecting an identifier for identifying a band use to be received (see Fig. 4 which shows the step of detecting and col. 9 lines 29-45 which recite the optical cross-connect detecting the failure of the individual wavelength); an identifier setting part for previously setting an identifier for identifying an expected band use (see col. 9 lines 46-63 which recite the step of identifying the wavelengths that have failed clearly reads on the step of identifier setting including the expected band use); and a control part for monitoring the detection part and the identifier setting part in each minimum

Art Unit: 2666

unit of a line, wherein the control part periodically monitors the identifier for identifying the band use to be received in the previously defined band, and when the received identifier is different from the identifier for identifying the expected band use, the identifier for identifying the expected band use, the identifier for identifying the band use is reestablished as the identifier for identifying the band use to be received (see col. 10 line 50 to col. 11 line 19 which recite the subnetwork restoration controller discerning by comparing the identifiers that it receives to control restoration of failed wavelengths (channels) of a particular link clearly reads on the control part for re-establishing the band use to be received).

## Allowable Subject Matter

8. Claims 2-5 would be allowable if rewritten to overcome the rejection(s) under 35 U.S.C. 112, 2nd paragraph, set forth in this Office action and to include all of the limitations of the base claim and any intervening claims.

#### Conclusion

9. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.

Sato discloses ATM switch and control method thereof.

Art Unit: 2666

Moran et al. disclose deterministic selection of an optimal restoration route in a telecommunications network.

Bada et al. disclose broadband transmitter for a signal consisting of a plurality of digitally modulated carriers.

10. Any inquiry concerning this communication or earlier communications from the examiner should be directed to Shick C Hom whose telephone number is 571-272-3173. The examiner can normally be reached on Monday to Friday with alternate Fridays off.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Seema Rao can be reached on 571-272-3174. The fax phone number for the organization where this application or proceeding is assigned is 703-872-9306.
